

5 Chart Signals That Actually Move Crypto.

The signals behind the headlines — one picture each — then exactly how the Blitz RSI Divergence Ladder turns them into a real entry.

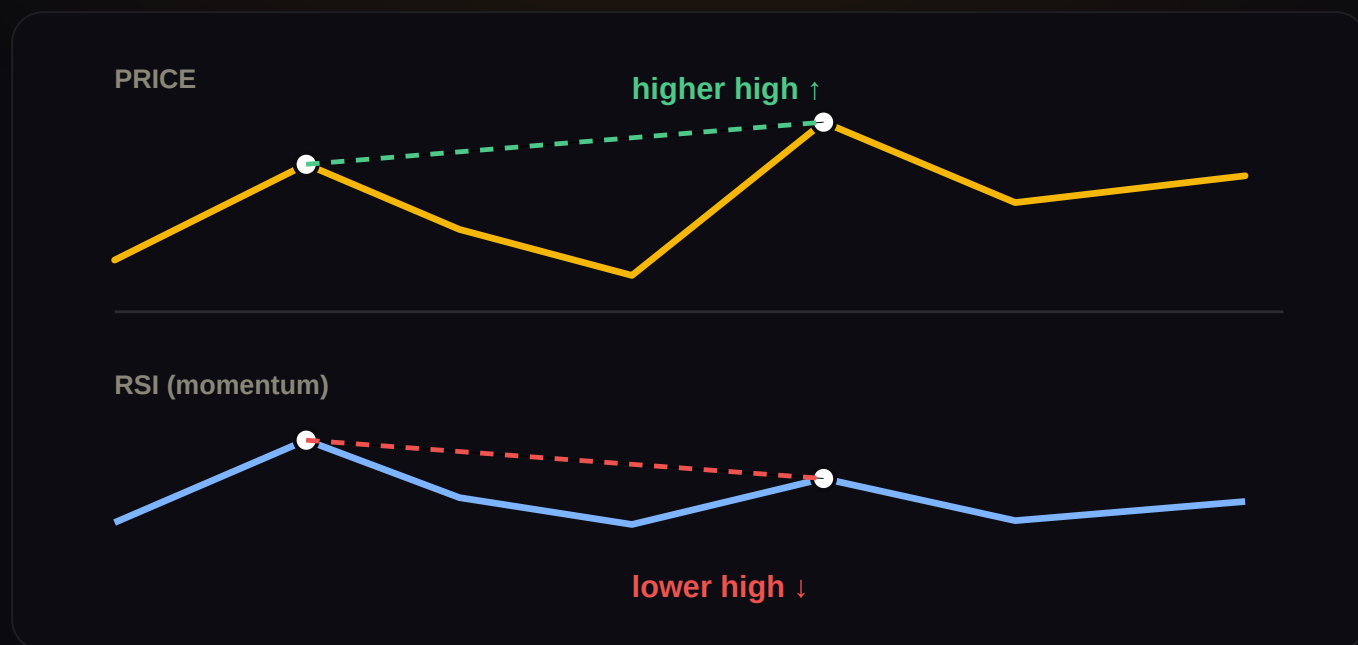

- 01–05** The five signals, drawn out
- 06** The 3-Gate Entry Ladder
- 07** The Trade Plan (entry · stop · targets)
- 08** Everything else it watches

READ THE CHART, NOT THE NOISE

SIGNAL 01

RSI Divergence.

Price makes a new high — but momentum doesn't follow. The move is running out of fuel.

- ♦ In Blitz: the first gate — **LONG/SHORT 1/3 · BULL/BEAR DIV.** The divergence pivot becomes your stop-loss level.

SIGNAL 02

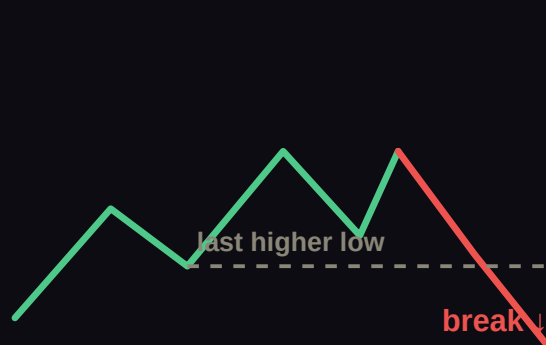

Break of Structure vs CHoCH.

The market moves in highs and lows. Which one it breaks tells you continue — or reverse.

BOS → continues

CHoCH → reverses

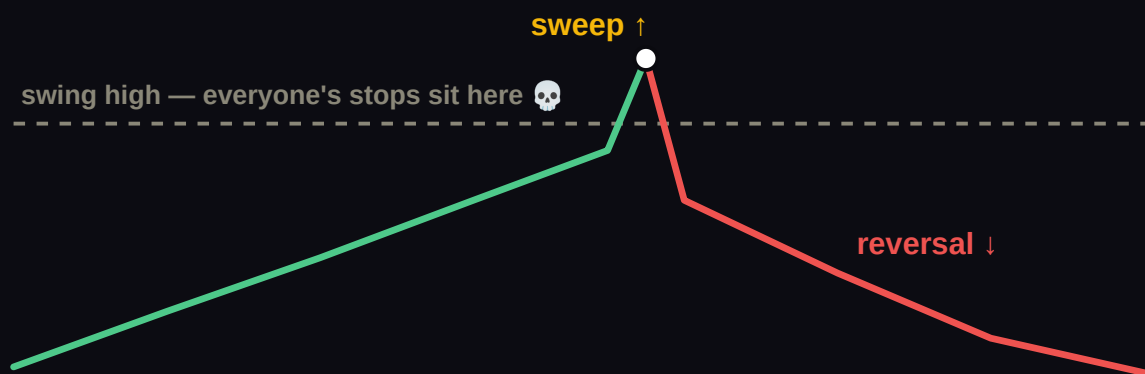

- ◆ In Blitz: **BULL/BEAR BOS** = trend continues · **BULL/BEAR CHoCH** = character change (reversal). Confirms gate 2/3.

SIGNAL 03

The Liquidity Sweep.

Price spikes just past an obvious high... then snaps back. You just watched a stop hunt.

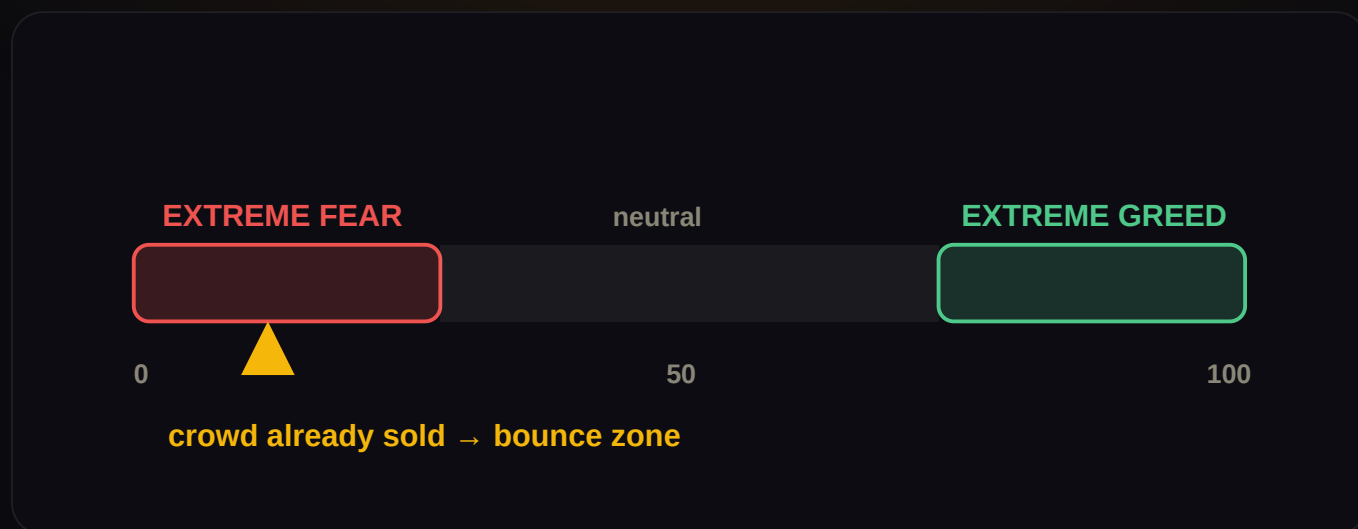

♦ In Blitz: **BULL/BEAR SFP · LIQ SWEEP** — a failed break that snaps back. Boosts a signal to **STRONG**.

SIGNAL 04

Fear & Greed **extremes.**

When everyone's terrified, sellers are nearly gone. When everyone's euphoric, buyers are nearly gone.

- ♦ In Blitz: the **RSI OB / OS** warnings flag the same overheated / oversold extremes on your chart.

SIGNAL 05

Follow the **flow**.

"Money is coming in" and "my bag is going up" aren't the same.
Watch where the flow actually lands.

- ◆ In Blitz: the dashboard's **Trend + ADX** row tells you if a move is a strong trend or a weak drift.

The 3-Gate **Entry Ladder**.

The signals above are ingredients. Blitz only calls an entry when three gates agree — in order.

1/3 Divergence

RSI diverges from price → an entry **candidate** appears. Not an entry yet. The divergence pivot becomes the invalidation (stop) level.

LONG / SHORT 1/3 · DIV

2/3 Break

Price **closes through the prior swing** (high for longs, low for shorts) → momentum has turned. Stronger if structure (BOS/CHoCH) agrees.

2/3 · BREAK

3/3 Confirm

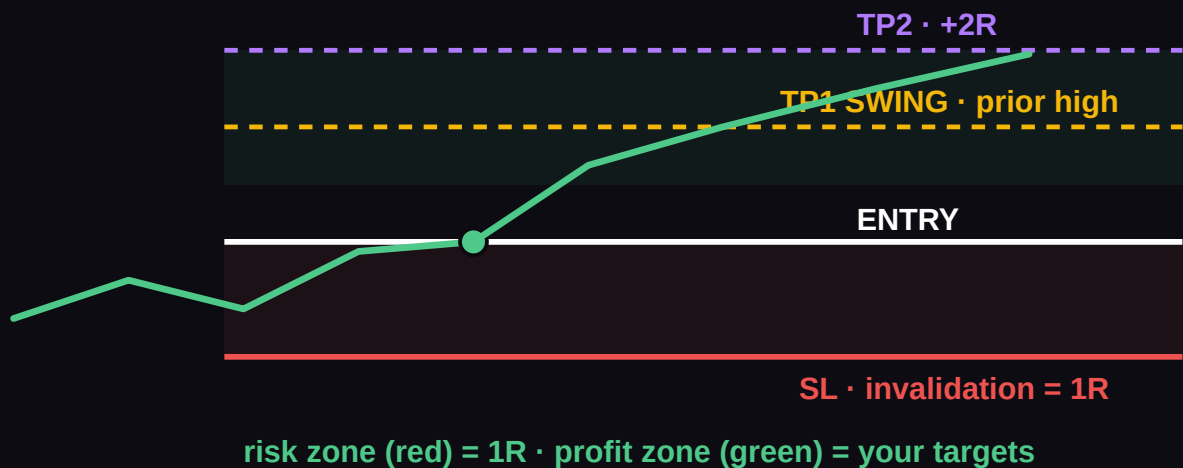

RSI crosses its confirm line (**50**) **and** price holds past the confirm EMA (**21**) → final entry. Marked **STRONG** when ADX shows a strong trend.

3/3 · CONFIRM / STRONG

Three independent things must line up — so you skip the fake-outs that trap traders who act on one signal alone.

The Trade Plan.

The moment the ladder confirms, the full plan is drawn on your chart — entry, stop, and targets, with the risk already measured.

- ♦ On close it stamps **WIN +xR** or **LOSS -xR**, and a bottom-right table tallies **win rate · total R · avg R** automatically.

Everything else it **watches**.

Beyond the ladder, one screen keeps score of the whole market for you.

MARKET STRUCTURE

BOS · **CHoCH** · **SFP** liquidity sweeps — trend, reversal, stop-hunts.

EXITS & MANAGEMENT

Low/High broken, trend flip, opposite divergence, **WATCH** · **WEAK** early warnings.

PATTERNS

Pistol & **L** (50/200 MA) setups + **Gartley** harmonic reversals.

CHANNELS

4H channel up / down / box, with breakout alerts.

TOP DASHBOARD

RSI · Trend+ADX · 4H channel · pattern · MA gap · **1H & 4H bias** · ladder position.

3 PRESETS + ALERTS

Reversal · **Trend** · **Zone** one-click setups + 39 TradingView alerts.

Everything on one overlay — so you read the chart in ten seconds, not ten indicators.
